# EFFICIENT, FLEXIBLE, SCALABLE

OUR PICK-BY-LIGHT SYSTEM IN STATION PICKING

## HOW IT WORKS

- ✓ **Step-by-step order transport**  
Each picking area is a „station“ through which the order moves.
- ✓ **Clear visual guidance**  
Pick2Light modules and terminals show the employee the next steps.
- ✓ **Seamless ERP/WaWi integration**  
The iX-tech software synchronizes the process with your system.
- ✓ **Clear identification & color coding**  
Each order is securely recognized, minimizing errors.
- ✓ **Dynamic process control**  
The zone configurator can flexibly adjust the number and size of stations.
- ✓ **Optimized workflow**  
A buffer storage system helps balance varying picking times.
- ✓ **Our Upgrade**  
For even better identification, our ix.spots provide optimal lighting of the pick compartments.

## YOUR ADVANTAGES

- ✓ **Maximum efficiency** - Significant increase in speed
- ✓ **Clear order assignment** - Thanks to intelligent color coding, all processes remain clear and structured
- ✓ **Flexible integration of hardware components** - Such as scanners, terminals, automatic intervention control, etc.
- ✓ **Minimal walking distance, maximum productivity** - Employees work directly at the pick locations, eliminating long distances
- ✓ **Efficient buffer storage** - Different processing times in the zones are automatically balanced
- ✓ **Dynamic adjustment** - With our zone configurator, the number and size of stations can be flexibly designed
- ✓ **Flexible mode switching** - Switch between batch and customer mode as needed

## PICK2LIGHT IN STATION PICKING

Maximum efficiency with minimal error potential: Our intelligent station picking optimizes your processes exactly as needed. Especially with high throughput and fast movers, our system ensures a smooth workflow. Each „station“ is equipped with our **pick2light hardware**, so all work steps can be carried out intuitively and error-free. Our iX-tech software enables flexible zone configuration, allowing stations to adjust dynamically and be expanded as needed. Thanks to the additional **ix.spots**, pick compartments are illuminated across their surface, making even larger storage areas clearly visible. This way, your employees always have an overview and work even more efficiently.

Fewer errors, more speed – all in a flexible, modular system.
