- ✓ **Intelligent control barcodes** with function descriptions
- ✓ **Optionale additions** Protective devices from aluminum L-/U-profiles, infrared light grids (for automatic removal confirmation), push buttons, etc.

WORK2LIGHT BASIC

In efficient production, assistance systems are essential – whether for quality control, assembly support, or employee training. However, large automation solutions often fail due to high costs or complex variations.

With **worklight**, iX-tech offers a smart, cost-efficient alternative: an intelligent **pick-by-light system** that operates without ERP integration and seamlessly integrates into existing processes. The **ix.net control module** enables autonomous process management via intelligent barcode navigation and records up to 3,000 work steps. Thanks to its modular and flexible design, our pick-by-light system can be used in almost any order-picking, production, or assembly situation, ensuring efficient and error-free workflows.

YOUR ADVANTAGES

- ✓ **Independent & flexibl** - No connection to ERP systems, PCs, or networks required
- ✓ **Maximum efficiency & error reduction** - Ensures the highest process reliability
- ✓ **Paperless & digita** - Modern, resource-efficient processes
- ✓ **Easy operation** - Intuitive system with minimal training time
- ✓ **Perfect for changing staff** - Ideal for multi-shift operations & flexible deployments
- ✓ **Modular & expandable** - The system grows with your needs
- ✓ **Quick integration** - Easy to retrofit into existing workstations
