INTUITIVE PACKING TABLE

WHAT IS INCLUDED IN AN EFFICIENT PACKING TABLE?

PACK2LIGHT

Packaging processes are becoming increasingly complex. They must function flawlessly and be adapted to customer requirements. Additions such as customs declarations, triple delivery notes, promotional items, or other personalizations significantly slow down the process. With the use of **pack2light**, processes at the packing station are efficiently managed, and relevant information is displayed via a touchscreen monitor.

The integrated **pick-by-light system** guides the packer to the correct picking compartments, ensuring a 100% verification of items for each order.

INDIVIDUAL PROCESS DESIGN

- ✓ **100% verification** through scanning of items or identification via a scale
- ✓ **Packaging instructions** hazardous materials or glass
- ✓ **Multilingual support in any number of languages** enhances user-friendliness for employees
- ✓ **Document control**, e.g., customs declaration
- ✓ **Carton and flyer control** for target-specific marketing and sustainable shipping

The picking process is paperless in the warehouse.

The items are securely and quickly packed at the packing station.

YOUR ADVANTAGES

- ✓ **Error-free packing** - 100% final inspection through, for example, item scanning
- ✓ **Maximum efficiency** - Significant increase in speed
- ✓ **Paperless & digital** - Instructions directly from the touchscreen monitor
- ✓ **Easy operation** - Intuitive system with minimal training time
- ✓ **Reduction in shipping costs** - Optimal packaging units used
- ✓ **Cost-effective** - Streamlined, flexible system without expensive wear parts
- ✓ **Modular System** - Easily integrable into your existing packing stations
