ERROR-FREE SORTING STATION
SMART SORTING WITH MAXIMUM CONTROL

HOW DOES IT WORK?

Intelligent Sorting
All order boxes in the sorting area are equipped with Pick-by-Light modules.

Automatic or Manual Assignment
Through an interface to your ERP, warehouse management (WaWi), or logistics system (LVS), orders are clearly assigned to boxes. Alternatively, assignments can also be made manually.

Simple Operation via Scanner
The employee starts the process using an MDE device (e.g., ix.mate) or similar. After scanning an item, the Pick-by-Light module on the corresponding order box lights up.

Efficient, Error-Free Sorting
Each scanned item automatically confirms the previous step and displays the next order box. The data is transmitted to your system in real time.

Seamless Transition to Packaging & Shipping
After completing the sorting process, all orders are correctly compiled and ready for further processing.

Faster, more flexible, safer – for maximum efficiency!

EFFICIENT ASSIGNMENT THANKS TO SMART SORTING TECHNOLOGY

Shipping companies face the challenge of handling ever-shorter delivery times, smaller batch sizes, and increasing shipment volumes. To respond flexibly and quickly, workflows must be efficient and reliable.

Our combination of powerful Pick-to-Light hardware and intelligent **iX-tech software** optimizes your sorting process and minimizes errors. Items picked during batch picking are assigned to orders at the sorting station – each box represents a customer order, while the precise **Put-to-Light system** on the shelf ensures error-free distribution.

By clearly separating picking, sorting, and packaging, these processes can run independently – efficiently, flexibly, and at your individual pace. We place great emphasis on process security, as every sorting error disrupts the logistics chain and reduces customer satisfaction.

With our solution, you optimize your workflows and simultaneously improve the quality of your delivery processes.

YOUR ADVANTAGES

More Flexibility - Independent processing of picking, sorting, and packaging

Error Minimization - Precisely assign items to customer orders

Short Employee Training Time - Intuitive system with easy operation for shift work or flexible use

Customer Satisfaction - Error-free delivery processes ensure a smooth logistics chain

Fast and Reliable Processing - Significant speed increase in your sorting process

Cost-Efficient - Lean, flexible system without expensive wear parts

Quick Integration - Easy installation and retrofit for existing shelves
